

## Prefabricated buildings

Prefabricated buildings Prefabricated buildings with unit frame made of special section of galvanized steel or hollow sections, WBP plywood floor paved with ceramic tiles or plastic flooring, side and partition walls and roof made of thermo insulating panels and windows and doors made of aluminium. The building process allows the extension and modification of all the spaces based on our client's demands. All units are designed to fulfill all the statical, antiseismic, water proofing and aesthetic requirements. The production process is carried out in our 15.000 sq meter industrial buildings in the industrial area of Volos. The total service provided by our company includes the project planning, design, construction, transportation, installation and, if necessary, the cubicle maintenance. Some examples of the uses of the buildings are: Bulletproof guardhouses. Outdoor electrical distribution substation. Cubicles for photovoltaic parks with or without equipment. Cellular telephony units. Television transmission units. Flat pack units. Heavy machinery control booths. [Click here to download the brochure](#)
